

*Meadean is a specialist management consultancy that provides strategic advice and targeted, effective solutions. We offer appropriate, innovative, value for money consulting and IT services that deliver lasting business benefits to clients.*

---

As a Director of Meadean, Jonathan has considerable experience of turning ideas into successes for numerous private and public organisations through the development and integration of business improvements to deliver real and lasting benefits.

Over the years he has enjoyed the challenge of working in a broad range of industries, including mobile telecoms; insurance; finance; nuclear fuels; criminal justice; and government. He is pragmatic and uses analytical techniques to inform business decisions and develop appropriate systems, coupled with the necessary skills to effectively implement the resulting decisions for long-term organisational benefit.

Jonathan has, over the course of his management consultancy career, specialised in working to deliver systems that work and support the target organisation or market. He has achieved this by not losing sight of the fact that programmes and IT solutions are supposed to support people and deliver benefits to organisations.

He has been intimately involved in the development of a wide range of significant public and private sector developments and reforms, which have contained a strong focus on the realisation of lasting business benefits. Relevant projects include:

- Functional Architect for EirGrid and SONI, implementing and developing the market systems supporting €3bn of wholesale electricity trades in Ireland.
- Developer of a HR case management system for a major UK Government department.
- Intra-Day Trading Specialist adviser to SEMO, as a major change to the Single Electricity Market is developed, designed and implemented.
- Adviser to a US electricity transmission system and market operator on its staffing requirements.
- Adviser to EirGrid in the development and documentation of business processes supporting its Transmission Use of System (TUoS) charging arrangements.
- Developer of a bespoke benefits monitoring tool for a major Government department, providing business case information for the major organisational transformational programme.
- Developer of a financial model of the arrangements required for the New Electricity Trading Arrangements (NETA) in England and Wales, resulting in a total spend of around £800m.
- Adviser providing analysis, modelling and tracking required for the introduction of a cost management incentive scheme for the electricity industry in England and Wales.
- Developer of a system which reports on the usage of a national system supporting the core business of a major Government department.
- Developer of a detailed optimisation system which provided 20 year electricity price forecasts for a multinational petrochemical company.
- A multi-functional database tool to receive; manage; and report on fuel cost data and electricity market prices around the world.
- A spreadsheet-based tool to determine optimal lifetime nuclear waste retrieval strategies for nuclear waste processing and storage facilities.
- Business and scenario models for a major international mobile telephony company, including various innovative m-commerce propositions.
